Mean 9.514; Variance 5.518; scale 1.724 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                 ρλ
designated Eos L2 or C-C chemokine receptor 3 (CKR-3), involve in leukocyte migration associated with inflammation. It was isolated from a human genomic library in EMBL3 SP/7T7 vector by screening with a PCR fragment generated from eosinophil cDNA using degenerate primers (see also T31337.44). A CKR-3 cDNA clone (T31335) was also isolated, and a consensus sequence is given in T31336. The genomic and cDNA clones can be used for the prodn. of recombinant CKR-3 in host cells, or to design antisense sequence useful for treating inflammatory disease. Example 7: Page 97: 130pp; English.

The present sequence encodes human C-C chemokine receptor 3 (CRK3), to which human ectaxin (hE), an eosliophil specific chemoatractant capable of stimulating eoslinophil accumulation and/or attracting he capable of stimulating eosliophil accumulation and/or attracting cosinophils (including chemotaxis), binds.

to modulate leukocyte trafficking, e.g. for treatment of inflammation, tumours, viral infections, autoimmune diseases, etc. claim 7; Page 48-50; 65pp; English.

This sequence comprises a full-length cDNA coding for novel human chemokine receptor 88-2B (W27124), a G protein coupled receptor that is involved in leukocyte trafficking. The 88-2B cDNA was obtained from a macrophage cDNA library using 88-2B-specific primers. A full-length clone (see T89161) for chemokine receptor 88C (W27123) cush is a so obtained. 88C and 88-2B cDNA scan be used to produce recombinant polypeptides in transformed host cells for use in the treatment of e.g. atheroslerosis, rheumatoid arthritis, tumours, as thma, viral infection, AIDS and inflammatory conditions. Nucleic acid fragments can be used to isolate genomic sequences, to detect alleles of the gene (for diagnosis or in gene therapy), to alter ceeptor genetics to facilitate identification of modulators and to produce knockout animals, and (antisense forms) to alter/study the sequence 1915 BP; 488 A; 470 C; 373 G; 584 T;

Products for treating and preventing atopic conditions e.g. allergic products for treating and preventing atopic conditions e.g. allergic rhinitis, dermatitis, conjunctivitis and bronchial asthma claims 12, 13, 14; Pages 16-20; Sipp; Bonalish.

This CDNA encodes a human ecsinophil ectaxin receptor. This 5099 base pair sequence comprises a 1065 base pair open reading frame encoding a 55 amino acid ecsinophil ectaxin receptor protein, flanked by a 5' genomic DNA sequence and a 3' terminator region. This novel ecsinophil ectaxin receptor fasty mated CC CKR3. Agents which bind to this ecsinophil ectaxin receptor can be used for the treatment and prevention of atopic conditions such as allergic rhinitis, dermatitis, conjunctivitis and bronchial asthma. Agents which lection in healthy individuals and slow or halt viral progression in infected patients. 3585 atopic condition; allergic rhinitis; conjunctivitis; bronchial asthma; beta-chemokine receptor; viral infection; ss. Homo sapiens. 59 Gaps aatccttctcctggcacctctgatatgccttttgaaattcatgttaaagaatccctaggc 1 AATCCTTTTCCTGGCACCTCTGATAT-CCTTTTGAAATTCATGTTAAAGAATCCTTAGGC aatgacaacctcactagatacagttgagacctttggtaccacatcctactatgatgacgt gggcctgctctgtgaaaaagctgataccagagcactgatggcccagtttgtgccccgct gtactccctggtgttcactgtgggcctcttgggcaatgtggtggtggtgatgatcctcat GTACTCCCTGGTGTTCACTGTGGGCCTCTTGGGCAATGTGGTGGTGGTGATGATCCTCAT 7; 1527 T; eosinophil eotaxin receptor genomic DNA flanking sequence 5; Indels Length (MERI) MERCK & CO INC.

Mammalian chemokine receptor-3 and related nucleic acids - useful to identify receptor inhibitors to treat inflammatory disease, e.g. autoimmune disorders, certain cancers, etc.

Claim !; Page 111-113; 153pp; English.

A genomic DNA clone (T31335) codes for a novel receptor (W03377), designated Bos Lo or Cc chemokine receptor 3 (CRR-3), involved in leukocyte migration associated with inflammation. It was isolated from a human library constructed from eosinophils obtd.

C from a patient with hyper-eosinophilic syndrome using a probe (pt cDNA) encoding the MIP-lalpha/RANTES receptor. A CRR-3 genomic clone (T31334) was also isolated, and a consensus sequence is given in T31336. The CDNA and genomic clones can be used for the prodn. of recombinant CRR-3 in host cells, or to design antisense sequences useful for treating inflammatory disease.

This is the nucleotide sequence encoding a novel CCKR3 chemokine receptor isolated from a Th0-activated human T-cell CDKR3 chemokine using the sequence amplified by primers T79097 and T79098 as a probe. The encoded protein can be used to screen for (ant)agonists that bind to the novel CCKI8 chemokines (W25941 and W25942). These (ant)agonists physiology or development.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Osteoporosis etc.

Claim 6: Page 15: 19pp: Japanese.

This sequence encodes human MIP-1 alpha/RANTES receptor (macrophage inflammatory protein 1 alpha/Regulated on activation, normal T cell expressed and secreted). The human MIP-1 alpha/RANTES receptor protein may be used in a method for the screening of human MIP-1 alpha/RANTES receptor affinity compounds. The MIP-1 alpha/RANTES receptor coding sequence may be included in an expression vector, preferably pcCR, and used to transform a CHO cell for use in the same method. The receptor protein can provide a preventive and treating agent for viral diseases, infectious diseases, tumours, allergy, diabetes, central diseases.
                                                                                                                                                                                                                                                                NOV-1997 (first entry)
Human MIP-lalpha/RANTES receptor protein coding sequence.
Human MIP-lalpha/RANTES receptor: osteoporosis: pCCR: digestive ulcer;

PT MIP-1-1pha and RANTES receptor nucleic acid - used to develop products for the detection of these cytokine(s) and their receptors, particularly in inflammatory processes Claim 1: Column 11-16; 12pp; Bnglish.

Claim 1: Column 11-16; 12pp; Bnglish.

This nucleic acid sequence encodes a claimed receptor for macrophage inflammatory protein-1 alpha (MIP-1 alpha) and regulated upon cartivation normal T expressed and secreted (RANTES) protein. Also claimed are: (1) a subsequence of the nucleic acid, having at least 12 contiguous nucleotides; (2) a cell transformed or transfected with the nucleic acid; and (3) purified NIP-1 alpha/RANTES receptor columned for detecting the MIP-1 alpha/RANTES receptor and polymorphisms in physiological samples. In addition, the receptor can be expressed and used to assay for maddition, the receptor can be expressed and used to assay for alpha/RANTES is useful for monitoring the levels of these cytokines in a patient. Such measurements are useful in following the anti-inflammatory effects of drugs and prospective usefulness of new anti-inflammatory effects. 279 GGCCCAGTTTGTGCCCCCGCTGTACTCCCTGGTGTTCACTGTGGGCCTCTTGGGCAATGT 338 400 518 460 638 GACTGAAGAGTTGTTTGAAGAGACTCTTTGCAGTGCTCTTTACCCAGAGGATACAGTATA 758 ggcccaactgctgccccctctgtactccttggtatrtgtcattggcctggttggaaacat caagttgaaggatgactgggtttttggtgatgccatgtgtaagatcctctctgggtttta ttacacaggcttgtacagcgagatcttttcatcatcctgctgacgattgacaggtacct ggccatcgtccacgccgtgtttgccttgcgggcacggaccgtcacttttggtgtcatcac cagcatcatcatttgggccctggccatcttggcttccatgccaggcttatacttttccaa gacccaatgggaattcactcaccacacctgcagccttcactttcctcacgaaagcctacg agagtggaagctgtttcaggctctgaaactgaacctctttgggctggtattgcctttgtt cetgaacetggccatttctgacetgctcttcctgttcacgettcccttctggatcgacta ; 0 SS Length 2156; 567 T; Indels cytokine; antiinflammatory; inflammation; 504 G; Score 424; DB 34; L Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              6
                                                                                                         to modulate leukocyte trafficking, e.g. for treatment of inflammation, tumours, viral infections, autoimmune diseases, etc. Caim 47, Page 56-57, 5pp; English.

This sequence comprises a coding sequence for macaque chemokine receptor 88C (W27125). It was isolated from macaque genomic DNA using primers (see T85176-77) based on human 88C cDNA (see T85161). The macaque 88C nucleotide sequence is 98% identical to that of human 88C. 88C cDNAs can be used to produce recombinant polypeptides in transformed host cells for use in the treatment of colypeptides in transformed host cells for use in the treatment of colypeptides in transformed sequences, statina, viral infection, AIDS and inflammatory conditions. Nucleic acid fragments can be used to isolate genomic sequences, to detect calleles of the gene (for diagnosis or in gene therapy), to alter receptor genetics to facilitate identification of modulators and to produce knockout animals, and (antisense forms) to alter/study the genetics and expression of the receptor.

This DNA sequence codes for a novel human macrophage selective CC chemokine receptor 5 polypeptide - used to inhibit membrane claim 15; Fig 1C; 70pp; English.

This DNA sequence codes for a novel human macrophage selective CC chemokine receptor (see W23835) designated CCR5. It was isolated common and an analyzer washen to see W33834) of CCR5. It was isolated common macrophages to HIV infection depends on the susceptibility of human macrophages to HIV infection depends on coupled cell surface emcrophages to HIV infection depends on cell surface emclecules. It plays an essential role in the coupled cell surface molecules. It plays an essential role in the establishment of stable, non-human cell lines and transgenic mammals having cells that coexpress human CD4 and CCR5 provides to CCR5, ccR5 variants, and CCR5-binding agents capable of blocking membrane fusion between HIV and target cells represent potential

Claim 15; Fig 1B; 70pp; English.

This DNA sequence codes for an Ala127Leu variant (see W23834)
of a novel human macrophage-selective CC chemokine receptor (see also W23835) that has been designated CCR5. It was isolated from a lambda gtll cDNA library. The conservative amino acid substitution should not affect the biological activity of CCR5. The susceptibility of human macrophages to HIV infection depends on cell surface expression of the human CD4 molecule and CCR5. CCR5 is a member of the 7-transmembrane superfamily of G-protein coupled cell surface meclecules. It plays an essential role in the membrane fusion step of infection by some HIV isolates. The membrane fusion step of infection by some HIV isolates. The catablishment of stable, non-human cell lines and transgenic mammals having cells that coexpress human CD4 and CCR5 provides valuable tools for research of HIV infection. Antibodies that bind membrane fusion between HIV and target cells represent potential anti-HIV therapeutics for macrophage tropic strains of HIV.

Antisense oligonucleotides can also be used to inhibit expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      946 AATGTGGCTATCCTTCTCTTTCCTATCAATCCATCTTATTTGGAAATGACTGTGAGGGG 1005

T (ant)agonists, for treatment of haematopoiesis, leukaemia, chronic
and acute inflammation, rheumatopoid arthritis, etc.
Claim 1; Page 44.46; 61pp; Bng1ish.
Claim 1; Page 44.46; 61pp; Bng1ish.
Creeptor HDGNR10 (W70602), a 7-transmembrane protein involved in
receptor HDGNR10 (W70602), a 7-transmembrane protein involved in
signal transduction. It was discovered in a cDNA library derived
from human monocytes. The cDNA may be incorporated into a vector
and utilised in the proffo. of recombinant HDGNR10, as a probe to
cetect mutations in the receptor gene associated with disease, and
in gene therapy to treat conditions related to underexpression of
the receptor e.g. to stimulate haematopoiesis, wound healing, or to
treat solid tumours, autoimnume diseases etc.

Mean 11.267; Variance 1.874; scale 6.013

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GUO B., KUNO K., HARADA A., MATSUSHIMA K.;
SUBMITTED (JAN-1997) TO EMBL/GENBANK/DDBJ DATA BANKS.

- PUNCTION: RECEPTOR FOR A C-C TYPE CHEMOKINE. BINDS TO MIP-1-ALPHA,
MIP-1-BETA AND RANTES AND GUSSEQUENTLY TRANSDUCES A SIGNAL BY
INCREASING THE INTRACELLULAR CALCIUM IONS LEVEL.

- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

- 1- TISSUE SPECIFICITY: DETECTED IN MONOCYTE/MACROPHAGE CELL LINES,
BUT NOT IN NONHEMATOPOLETIC CELL LINES.

- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

Claim 5; Page 15; 51pp; English.

This is a human eosinophil eotaxin receptor. The 5099 base pair encoding this is a human eosinophil eotaxin receptor. The 5099 base pair encoding this sequence comprises a 1065 base pair open reading frame encoding this 555 amino acid eosinophil eotaxin receptor protein, flanked by a 5′ genomic DNA sequence and a 3′ terminator region. This novel eosinophil eotaxin receptor designated CC (KR3. Agents which bind to this eosinophil eotaxin receptor can be used for the treatment and prevention of atopic conditions such as allergic thinitis, dermatitis, conjunctivitis and bronchial asthma. Agents which block this eosinophil eotaxin receptor can be used to prevent viral infection in healthy individuals and slow or halt viral progression
 Human eosinophil eotaxin receptor protein CC CKR3.
Eosinophil eotaxin receptor; CC CKR3, human; treatment; dermatitis; atopic condition; allergic rhinitis; conjunctivitis; bronchial asthma; beta-chemokine receptor; viral infection.
 New isolated human eosinophil eotaxin receptor - used to develop products for treating and preventing atopic conditions e.g. allergic rhinitis, dermatitis, conjunctivitis and bronchial asthma

 Gray PW, Rabort CJ, Schweickart VL;

NP197341689/31.

NP52B; T85162.

New nucleic acid encoding chemokine receptors 88-2B and 88C - used nodulate leukocyte trafficking, e.g. for treatment of condulate leukocyte trafficking, e.g. for treatment of inflammation, tumours, viral infections, autoimmune diseases, etc.

This polypeptide sequence comprises novel human chemokine receptor This polypeptide sequence comprises novel human chemokine receptor 88-2B, a G protein coupled receptor that is involved in leukocyte trafficking. Its amino sequence was deduced from a CDNA clone (T85162) isolated from a macrophage library. It shows 72% identity cto CCCKRI. Chemokine receptors 88C (see W27123) has also been identified. 88C and 88-2B receptors and their polypeptide fragments can be produced in transformed host cells. The receptors, peptides comprising one or more of the extracellular or intracellular domains, and anti-receptor antibodies can be used to modulate receptor activities, particularly ligand and G protein binding, and

 Mammalian Chemokine receptor-3 and related nucleic acids - useful to identify receptor inhibitors to treat inflammatory disease, e.g. autoimmune disorders, certain cancers, etc.

Claim 10; Page 113-114; 155pp; English.

C A novel human receptor (W03377), designated Eos L2 or C-C chemokine receptor 3 (CKR-3), is involved in leukcoyte migration associated with inflammation. Its sequence was deduced from a cDNA clone (T31335) isolated from a hyper-eosinophilic syndrome patient. A c silghtly different anno acid sequence (W03376) was deduced from a genomic clone (T3134) and a consensus sequence is given in W0378. Recombinant CKR-3 can be produced in host cells, and is useful for c inhibitors can be used to treat inflammatory disease.

 identify receptor inhibitors to treat inflammatory disease, e.g. autoimmune disorders, certain cancers, etc.

Claim 10; Page 110-111; 153pp; English.

A novel human receptor (W03376), designated Eos L2 or C-C chemokine receptor 3 (CKR-3), is involved in leukocyte migration associated with inflammation. Its sequence was deduced from a genomic DNA was deduced from a cDNA clone (T31334). A slightly different amino acid sequence (W03377) was deduced from a cDNA clone (T31335) and a consensus sequence is given in W03378. Recombinant CKR-3 and be produced in host cells, and is useful for screening for CKR-3 ligands, promoters and inhibitors. The inhibitors can be used to treat inflammatory

 Mammalian chemokine receptor-3 and related nucleic acids - useful to identify receptor inhibitors to treat inflammatory disease, e.g. autoimmune disorders, certain cancers, etc.

Claim 10; Page 115-116; 153pp; English.

A consensus amino acid sequence (W03378) was produced for a novel human receptor, designated Eos L2 or C-C chemokine receptor 2 (CKR-3).

It was obtd. by comparing the sequences (W03376-77) deduced from a CKR-3 genomic clone (T31334) and a cDNA clone (T31335). Initial sequence information revealed 2 regions in which the cDNA sequence appeared to be shifted in frame, resulting in 2 sets of 4 contiguous analysis revealed only a single difference between the 2 open creating trames, the genomic clone coding for threonine at position sequence 355 AA.

 Disclosure; Page 15-16; 19pp; Japanese.

This sequence represents human MIP-1 alpha/RANTES receptor (macrophage inflammarcry protein 1 alpha/regulated on activation, normal T cell expressed and secreted). The human MIP-1 alpha/RANTES receptor protein may be used in a method for the screening of human MIP-1 alpha/RANTES receptor receptor receptor affinity compounds. The MIP-1 alpha/RANTES receptor coding sequence may be included in an expression vector, preferably pCCR, and used to transform a CHO cell for use in the same method. The receptor protein can provide a preventive and treating agent for viral diseases,
 infectious diseases, tumours, allergy, diabetes, central diseases, hyperlipidaemia, hypercholesterolaemia, osteoporosis, digestive ulcers,

N-PSDB; T88161.

New nucleic acid encoding chemokine receptors 88-2B and 88C - used to modulate leukocyte trafficking, e.g. for treatment of to modulate leukocyte trafficking, e.g. for treatment of inflammation, tumours, viral infections, autoimmune diseases, etc. Inflammation, tumours, viral infections, autoimmune diseases, etc. Claim 16; Page 47-48; 65pp; English.

Scalar 16; Page 47-48; 65pp; English.

This polypeptide sequence comprises novel human chemokine receptor trafficking. Its amino sequence was deduced from a CDNA clone (T85161) isolated from a macrophage library. It shows 62% identity to CCCKR1. Chemokine receptor 88-2B (see W27124) has also been identified. 88C and 88-2B receptors and their polypeptide fragments can be produced in transformed host cells. The receptors, peptides comprising one or more of the extracellular or intracellular comprising one or more of the extracellular or intracellular receptor activities, particularly ligand and 6 protein binding, and are potentially potentially useful in the treatment of are potentially potentially useful in the treatment of anteroslerosis, inflammatory conditions, pathological immune response, abnormal haematopoietic processes etc.

 useful to diagnose, prevent and/or treat inflammatory disorders, useful to diagnose, prevent and/or treat inflammatory disorders, autolimune disease and viral infection allowable diseases and viral infection claim 4: Fig 1b-c: 94pp; Braglish.

The present sequence is human CC (Cys-Cys) chemokine receptor The present sequence is human CC (Cys-Cys) chemokine receptor C chemokines, but not by moncyte chemoattractant protein 1 (MCP-1), MCP-2, MCP-3, interleukin-8 (IL-8) or growth related gene product alpha (GRO alpha) chemokines. Active CCR-5 is also a receptor of human immunodeficiency virus type 1 or type 2 (HIV-1) or HIV-2). CCR5 or its cDNA can used to diagnose, treat and/or prevent inflammatory diseases, e.g. rheumatoid arthritis, glomerulonephitis, asthma, idiopathic pulmonary fibrosis and sequence 352 AA;

fusion between HIV and a target cell

C chemokine receptor 5 polypeptide - used to inhibit membrane

fusion between HIV and a target cell

C taim 68; Fig 1C; 70pp; English.

This protein sequence comprises of a novel human macrophage-selective

C c chemokine receptor that has been designated CR5. The sequence
was deduced from an isolated CDNA clone (see T76920). An Alal27Leu

variant (see W238340 of CCR5 was also identified. The susceptibility

of human macrophages to HIV infection depends on cell surface
expression of CD4 and CCR5. CCR5 is a member of the 7-transmembrane

superfamily of G-protein coupled cell surface molecules. It plays

an essential role in the membrane fusion step of infection by some

HIV isolates. The establishment of stable, non-human cell lines

and transgenic manmals having cells that coexpress human CD4 and

CCR5 provides valuable tools for research of HIV infection.

Antibodies that bind to CCR5, CCR5 variants, and CCR5-binding

agents capable of blooking membrane fusion between HIV and target

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: n-genes

n-geneseq32 1:part1 2:part2 3:part3 4:part4 5:part5 6:part6 7:part7 8:part8 9:part9 10:part10 11:part11 12:part12 13:part13 14:part14 15:part15 16:part16 17:part17 18:part18 19:part19 20:part20 21:part21 22:part22 23:part23 24:part24 25:part25 26:part26 27:part27 28:part28 29:part29 30:part30 31:part31 32:part32 33:part33 34:part34 40:part40

Statistics: Mean 9.178; Variance 5.134; scale 1.788

Pred: No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

```
S
 - useful
 Mammalian chemokine receptor-3 and related nucleic acids - useful identify receptor inhibitors to treat inflammatory disease, e.g. autoimmune disorders, certain cancers, etc.

Claim 1; Page 111-113; 153pp; English.

A genomic DNA clone (T31335) codes for a novel receptor (W03377), designated Eos L2 or C-C chemokine receptor 3 (CRR-3), involved in leukocyte migration associated with inflammation. It was isolated from a human library constructed from eosinophils obtd.

 Gaps
from a patient with hyper-eosinophilic syndrome using a probe top CDNA) encoding the MIP-1alpha/RANTES receptor. A CRR-3 genomic clone (171314) was also isolated, and a consensus sequence is given in T31336. The cDNA and genomic clones can be used for the prodn. of recombinant CKR-3 in host cells, or to design antisense sequences useful for treating inflammatory disease. Sequence 1193 BP; A; 310 C; 275 G; 274 T;

Mammalian chemokine receptor-3 and related nucleic acids - useful to dentify receptor inhibitors to treat inflammatory disease, e.g. autoimmune disorders, certain cancers, etc.

Claim 1; Page 114-115; 153pp; English.

Claim 1; Page 114-115; 153pp; English.

Claim 2; Receptor comparing a conservation receptor 2 (CRR-3).

It was deduced by comparing a genomic clone (T31334) and a CDNA clone (T31335) coding for CRR-3 proteins (W03375 and W03377) having slightly different sequences. Initial sequence information revealed 2 regions in which the CDNA sequence appeared to be shifted in CR frame, resulting in 2 sets of 4 contiguous amino acid differences in the predicted proteins. Further sequence analysis revealed only a single difference between the 2 open reading frames, the genomic clone coding for threonine at position 276 and the CDNA clone for

New isolated human ectaxin gene - used to develop prods. for the disease, infections and treatment of e.g. inflammation, allergies, auto-immune disease, infections and treatment of e.g. inflammation, allergies, auto-immune disease, infections and tumours. Example 7; Page 97: 130pp; Enalish.

The present sequence encodes human C-C chemokine receptor 3 (CRK3), to which human ectaxin (hE), an eosinophil specific chemoattractant capable of stimulating eosinophil social compilation and/or attracting he capable of stimulating eosinophil security is prevention or treatment of hE associated diseases or conditions. The products can be used to develop products for the diagnosis, prevention or treatment of hE associated diseases or conditions. The products can be used to treat inflammatory or allergic diseases and conditions, including respiratory allergic diseases or pneumonis, allergic consinophilic pneumonias such as Loeffler's syndrome and chronic eosinophilic pneumonia, interstitail ung diseases (LID) such as inflammatory fibrosis or ILD associated with rheumatcid arthritis, systemic lupus erythematcosus (SLE), ankylosing spondylitis, systemic lupus erythematcosus (SLE), ankylosing spondylitis, systemic anaphylaxis or hypersensitivity cesponses, drug allergies (e.g. to penicillin and cephalosporins), insect sting allergies, inflammatory dermaticoses (e.g. crohn's dermatitis, eczema, atopic dermatitis, allergic context dermatitis, and inclammatory dermatoses (e.g. crohn's dermatitis), eosinophilic myositis and fascitis, multiple sclerosis, SLE, myasthemia gravis, juvenile onset diabetes, glomerulonephritis, autoimmune thyroiditis, medicitis descent dermatitis, allergic ceres or conditions requiring the inhibition of undesirable the skin or organs. The products can also be used to treat other efficient efficiences inflammatory including the inhibition of undesirable inflammatory including the conditions arequiring the conditions requiring the inhibition of undesirable inflammatory including the science of the skin or o

 useful to
 Mammalian chemokine receptor-3 and related nucleic acids - useful to identify receptor inhibitors to treat inflammatory disease, e.g. autofinmune disorders, certain cancers, etc.

Claim 1: Page 109; 153pp; English.

C deasignated EoS L2 or C-C chemokine receptor (W03376), dessignated EoS L2 or C-C chemokine receptor (RR:3), involved in leukocyte migration associated with inflammation. It was isolated from a human genomic library in EMBL3 SP7/T7 vector by screening with a PCR fragment generated from eosinophil cDNA cusing degenerate primers (see also T3137-44). A CKR-3 cDNA clone (T31335) was also isolated, and a consensus sequence is given in T31336. The genomic and cDNA clones can be used for the prodn. of recombinant CKR-3 in host cells, or to design antisense sequences useful for treating inflammatory disease.

to modulate leukocyte trafficking, e.g. for treatment of inflammation, tumours, viral infections, autoimmune diseases, etc. Claim 7; Page 48-50; English.

This sequence comprises a full-length cDNA coding for novel human chemokine receptor 88-2B (W27124), a G protein coupled receptor that is involved in leukocyte trafficking. The 88-2B cDNA was obtained from a macrophage cDNA library using 88-2B specific primers. A full-length clone (see T89161) for chemokine receptor 8BC (W27123) was also obtained. 8BC and 88-2B cDNAs can be used to produce recombinant polypeptides in transformed host cells for use in the treatment of e.g. atheroslerosis, rheumatoid arthritis, tumours, as thma, viral infection, AIDS and inflammatory conditions. Nucleic acid fragments can be used to isolate genomic sequences, to detect alleles of the gene (for diagnosis or in gene therapy), to alter receptor genetics to facilitate identification of modulators and to produce knockout animals, and earliesmes forms) to alter/study the sequence 1915 BP; 488 A; 470 C; 373 G; 584 T;

New isolated human eosinophil eotaxin receptor - used to develop products for treating and preventing atopic conditions e.g. allergic rhinitis, dermatitis, conjunctivitis and bronchial asthma claims 12, 13, 14; Pages 16-20; 51pp; English.

This cDNA encodes a human eosinophil eotaxin receptor. This 5099 base pair sequence comparises a 1065 base pair open reading frame encoding a sequence conjunctivity of the receptor protein, flanked by a 5, genomic DNA sequence and a 3' terminator region. This novel eosinophil eotaxin receptor fash and the confined and prevention of atopic conditions such as allergic the treatment and prevention of atopic conditions such as allergic rhinitis, dermatitis, conjunctivitis and bronchial asthma. Agents which block this eosinophil eotaxin receptor can be used for rhinitis, dermatitis, conjunctivitis and bronchial asthma. Agents which block this eosinophil eotaxin receptor can be used to prevent viral infected patients.

Human CCKR3 chemokine receptor coding sequence.
CCF18 chemokine; mouse; primer; PCR; amplification; antagonist; human; abnormal physiology; development; anti-viral; probe; hybridisation; ss Homo sapiens.
 New isolated chemokine CCF8 and chemokine receptor CCKR3 - used to develop products useful for the diagnosis and treatment of conditions associated with abnormal physiology or development Claim 15; Page 60-62; 73pp; English.

This is the nucleotide sequence encoding a novel CCKR3 chemokine receptor isolated from a Th0-activated human T-cell CDNA library using the sequence amplified by primers T79097 and T79098 as a probe. The encoded protein can be used to screen for (ant)agonists that bind to the novel CCF18 Chemokines (W25941 and W25942). These (ant)agonist are useful in the treatment of conditions associated with abnormal physiology or development.

 Preparation of human MIP-1-alpha/RANTES receptor protein - used in reteatment of viral diseases, tumours, allergy, diabetes osteoporosis etc.

The treatment of viral diseases, tumours, allergy, diabetes calcaded on several protein the properties of the conference encodes human MIP-1 alpha/RANTES receptor protein alpha/regulated on activation, normal r cell captors protein alpha/regulated on activation, normal r cell expressed and secreted). The human MIP-1 alpha/RANTES receptor protein may be used in a method for the screening of human MIP-1 alpha/RANTES receptor coding sequence may be included in an expression vector, preferably pock, and used to transform a CHO cell for use in the same method. The receptor protein can provide a preventive and treating agent for viral diseases, infectious diseases, tumours, allergy, diabetes, central diseases, infectious diseases, tumours, allergy, diabetes, central diseases, chyperlipidaemia, hypercholesterolaemia, osteoporosis, digestive ulcers,

The sequence is that of the C-C chemokine receptor gene which was isolated by PCR from PMA treated HL60 cells using PCR primers whose sequence was designed to correspond to conserved sequences in two transmembrane regions of known cytokine receptors. The sequence can be used in therapeutic or diagnostic compsns. for inflammation and other cytokine mediated disorders.

Presults with the detection of these cytokine(s) and their receptors, products for the detection of these cytokine(s) and their receptors, products for the detection of these cytokine(s) and their receptors, articularly in inflammatory processes claim 1: 60 lumn 11-16; 12pp; English.

This nucleic acid sequence encodes a claimed receptor for macrophage inflammatory protein-1 alpha (MIP-1 alpha) and requlated upon activation normal T expressed and secreted (RANIES) protein. Also claimed are: (1) a subsequence of the nucleic acid, having at least 12 contiguous nucleotides; (2) a cell transformed or transfected with the nucleic acid; and (3) purified MIP-1 alpha/RANIES receptor and polymorphisms in physiological samples. Collapha/RANIES receptor and polymorphisms in physiological samples. Collapha/RANIES is useful for moaltoning the levels of these cytokines in a patient. Such measurements are useful in following the antimital minfammatory effects of drugs and prospective usefulness of new antiminal minfammatory agents.

using primers (see T85176-77) based on human 88C cDNA (see T85161). The macaque 88C nucleotide sequence is 98% identical to that of human 88C. 88C cDNAs can be used to produce recombinant polypeptides in transformed host cells for use in the treatment of e.g. atheroslerosis, rheumatoid arthritis, tumours, asthma, viral infection, AIDS and inflammatory conditions. Nucleic acid fragments can be used to isolate genomic sequences, to detect alleles of the gene (for diagnosis or in gene therapy), to alter receptor genetics to facilitate identification of modulators and to produce knockout animals, and (antisense forms) to alter/study the sequence 1059 BP; 249 A; 274 C; 227 G; 309 T;

Tribuly, William Communication of Holy and a target cell fusion between HIV and a target cell fusion between HIV and a target cell fusion between HIV and a target cell claim 15; Fig 1C; 70pp; English.

This DNA sequence codes for a novel human macrophage-selective CC chemoxine receptor (see Wills) designated CCR5. It was isolated from a lambda gill cDNA library. Another isolated DNA molecule (see Troging) codes for an Alalizheu variant (see Wilsa) of CCR5. The susceptibility of human macrophages to HIV infection depends on cell surface expression of the human CD4 molecule and CCR5. CCR5 is a member of the 7-transmembrane superfamily of G-protein coupled cell surface molecules. It plays an essential role in the membrane fusion step of infection by some HIV isolates. The membrane fusion step of infection by some HIV isolates. The stablishment of stable, non-human cell lines and transgenic mammals having cells that coexpress human CD4 and CCR5 provides valuable tools for research of HIV infection. Antibodies that bind to CCR5, CCR5 variants, and CCR5-binding agents capable of blocking anti-HIV therapeutics for macrophage tropic strains of HIV.

Antisense oligonucleotides can also be used to inhibit expression of CCR5 in a cell.

 If Human G-protein chemokine receptor, HDGNR10 - useful to identify (ant)agonists, for treatment of haematopoiesis, leukaemia, chronic and acute inflammation, rheumatoid arthiitis, etc.

SC laim 1; Page 44-46; 61pp; Bnglish.

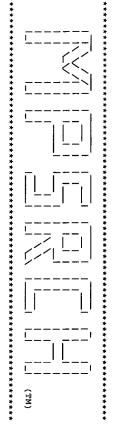

CA cDNA clone (T44042) codes for the novel human G-protein chemokine receptor HDGNR10 (W07602), a 7-transmembrane protein involved in Signal transduction. It was discovered in a cDNA library derived from human monocytes. The cDNA may be incorporated into a vector and utilised in the prodn. of recombinant HDGRN10, as a probe to detect mutations in the receptor gene associated with disease, and in gene therapy to treat conditions related to underexpression of the receptor e.g. to stimulate haematopoiesis, wound healing, or to treat solid tumours, autoimmune disease etc.

Statistics: Mean 48.857; Variance 137.519; scale 0.355

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Result Score 2751 2751 1874 1828 1771 1496 1496 14497 1433 1433 11433 11433 11433 11756 11079 11079 11079 11079 17079 17079 17079 17079 17079 17079 17079 Query Match 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25.57 25 Length DΒ G02436 A57237 I49341 A45177 JC2443 13450 A57160 A57160 JC4587 JC5067 152068 JC5068 B55735 A45611 A39445 G02653 A43113 S55594 Ħ I49339 SUMMARIES chemokine (C-C) recep macrophage inflammato CC chemokine receptor chemokine (C-C) recep G protein-coupled rec chemokine (C-C) recep MIP-1 alpha receptor chemokine (C-C) recep G protein-coupled rec hypothetical G-protein-coupled reclymphocyte-specific G G protein-coupled pep G protein-coupled pep G protein-coupled recinterleukin-8 recepto Description MIP-1 chemokine (C-C) recep C-C chemokine recepto alpha receptor recepto recepto recepto 1.74e-245 7.85e-195 1.11e-195 1.11e-195 1.11e-189 5.17e-189 5.17e-186 3.51e-170 6.85e-170 2.81e-151 1.17e-133 6.86e-123 6.86e-123 4.68e-95 7.73e-91 7.73e-91 6.20e-88 9.08e-80 0.00e+00 2.08e-252 0.00e+00 NO.

ch\_pp protein - protein database search, using Smith-Waterman algorithm Tue Dec 8 13:16:24 1998; MasPar time 21.54 Seconds 820.602 Million cell updates/sec

Tabular output not generated.

Scoring table: Sequence: Description: Perfect Score: PAM 150 Gap 11 >US-08-963-656-4 (1-355) from US08963656.pep 2760 1 MTTSLDTVETFGTTSYYDDV.....LERTSSVSPSTAEPELSIVF 355

Searched: 165420 segs, 49795644 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: sptremb16

1:sp\_archea 2:sp\_bacteria 3:sp\_fungi 4:sp\_human
5:sp\_invertebrate 6:sp\_mammal 7:sp\_mhc 8:sp\_organelle
9:sp\_phage 10:sp\_plant 11:sp\_rodent 12:sp\_unclassified
13:sp\_vertebrate 14:sp\_virus

Statistics: Mean 49.358; Variance 131.120; scale 0.376

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

74019 seqs, 26840295 residues

Searched:

Database: swiss-prot35 1:swissprot

Statistics: Mean 50.467; Variance 121.099; scale 0.417

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

Statistics: pir56
1:pir1 2:pir2 3:pir3 4:pir4 Mean 48.858; Variance 137.386; scale 0.356

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
